                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCING READ COVERAGES. Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ANNOTATION OF FEATURES:

STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity (expect < 1e-34) to the EST and cDNA sequences idensitate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht
                                                                                                                                                                                                                                                                                                                                                                                                                           Worley, K.C.

The present invention describes primer sets for synthesising 5602 full
[length cDNAs defined in the specification, Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises a least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence, where the oligonucleotide opprises at least 15 nucleotides and the combination of the 5'-end sequence's'-and sequence's selected from those defined in the specification. The primers set can be used in antiense therapy and in complementary full-length collars. The primers are also useful for the particularly full-length collars. The primers are also useful for the collars encoded by the full-length collars. The primers are also useful for the full-length collars. The primers are also useful for the collars encoded by the full-length collars. The primers are also useful for the collars and primers and sequences; AAH13612 represent human and those to AAH13622 represent human and a cludes, and AAH13622 to AAH13632 represent collars and the exemplification of the collapse. present invention

The invention also relates to vectors and recombinant host cells comprising nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proceins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis

differentiation activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity; hammatopolesis regulatory activity; issue growth activity; immunomodulatory activity; activin- or inhibin-related activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or thrombolytic activities; normal activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis.

CC bepending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions are useful for preventing, treating or lighted activities proliferation or activity at atherosclerosis, coronary heart disease, arterial isohaemia, bone disorders (e.g., myeloid or lymphoid cell disorders, bone disorders (e.g., osteoporosis), and abnormal vactular growth. Polypeptides involved with tissue regeneration and regal infections and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, batterial infections in addition to immune disorders; committing (e.g., of burns, incisions and ulcers), while those with committee with growth factor activity may be used to promote cell growth. For example, such polypeptides may be used to munipulate stem cells in culture to give rise to neurospithelial cells the control of c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug

RESULT 4 AAH16384 ID AAH1

The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonuclectide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence, where the complementary to a polynucleotide comprises at least 15 nucleotides and the combination of complementary strand of a polynucleotide on those defined in the comprise and the comprises at least 15 nucleotides and the combination of coligonucleotide which comprises a 1'-end sequence, where the comprises at least 15 nucleotides and the combination of coligonucleotide which comprises a selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, capacitarly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proceins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and any specialised methods. AAH13613 to AAH13613 represent human anno acid sequences; and AAH13623 represent human anno acid sequences; and in the exemplification of the construction of the construction invaries. 144 120 Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length 84 9 GGGCCTCAGGAGCGTGGCGCCCCCCTGGGCGGACTCCCCCCATCCGCGGGCGCGAATG GGGCCTCAGGAGCGTGGCGCCCCCTGGGCGGACTCCCCCCATCCGCGGGCGCGCATG 1 AGTACACACGCACCTGAGTGAGTGGCACCAGAGGACCCTCTCCATGTTTAGGGACCTCCT 25 AGTACACACGCACCTGAGTGAGTGGCACCAGAGGACCCTCTCCATGTTTAGGGACCTCCT ., , Yamamoto T; DB 4; Length 1614; 8; SEQ ID NO 15334; 2537pp + Sequence Listing; English. ID NO 3935; 2537pp + Sequence Listing, English. Claim 1; SEQ

The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the

complementary strand of a polynucleotide which comprises one of the 5602

nucleotide sequences defined in the specification, where the

oligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to a

complementary strand of a polynucleotide which comprises a 1'-end sequence, where the

complementary strand of a polynucleotide sand the combination of

polynucleotide which comprises a 1'-end sequence complementary to a

coligonucleotide which comprises a 1'-end sequence, where the

coligonucleotide which sequence is selected from those defined in the

specification. The primer sets can be used in antisense therapy and in

gene therapy. The primers are useful for synthesising polynucleotides,

confercing and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers are also useful for the

checking and primers and used in antisense therapy and

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed sequence tags for identifying expressed sequence tags for identifying expressed cerivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. The present invention describes primer sets too synthesising bout inter-

(a) an oligo-dT primer and an oligonucleotide complementary to the
complementary strand of a polynucleotide which comprises one of the 5602

(a) an oligo-dT primer and an oligonucleotide which comprises one of the 5602

(b) an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5-end
sequence and an oligonucleotide comprising a sequence complementary to a
complementary strand of a polynucleotide which comprises a 5-end
sequence and an oligonucleotide comprising a sequence complementary to a
complementary strand of a polynucleotide which comprises a 5-end
sequence and an oligonucleotide comprising a sequence complementary to a
coligonucleotide which comprises a 3'-end sequence, where the
coligonucleotide comprises at least 15 nucleotides and the combination of
the 5'-end sequence/3'-end sequence is selected from those defined in the
specification. The primers are useful for synthesising polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
gene therapy. The primers are useful for synthesising polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
chefull-length cDNAs. The primers are also useful for the
chefull-length cDNAs. The primers allow obtaining of the full-length
cDNAs easily without any specialised methods; AAH3362 to AAH3362 and
AAH3331 to AAH3342 represent human amino acid sequences, and AAH3322 to AAH3322 represent
coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present invention describes primer sets for synthesising 5602 full-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   301 ATTCCGGGCTGCAGATTGACGGGGATCCCGGATGCACCGCGCGCCCCCGGGCCCTCACCG

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of algonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide comprises a 1'-end sequence of complementary to a polynucleotide which comprises a 1'-end sequence of 10 nucleotides and the primer sets can be used in antisense therapy and in specification. The primers are used in antisense therapy and in gene therapy. The primers are used in antisense therapy and in gene therapy. The primers are used in antisense therapy and in gene therapy. The primers are used in antisense therapy and in particularly full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers are also useful for the chetction and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and primers allow obtaining of the full-length cDNAs and cDNAs and methods. AAH03166 to AAH13628 and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                          The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as Act12789-ACH50811, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypebtide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences care useful in diagnostics as expressed sequence tags (EST) for inforensies, in assessing blodiversities, or in identifying mutations. In forensies, in assessing blodiversities, or in identifying mutations responsible for generic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for Circmosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense by sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1165
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                986 TGTGATGAGGCCCCGGTTTGGCTCCCGATCTGAAGGCGCCCAGCTTCGGGGCCCCCGCGGATG 1045
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GCGAAGGGGGATGCCGCAAAGCTCCGTGCTCTTGTGGACGCCACCACCTACCCCCAGG 1105
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  214

The invention relates to an isolated polynuclectide comprising any one of 38043 cDNA sequences, appearing as ACH1789-ACH5081, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynuclectide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (BST) for infentifying expressed genes or for physical mapping of the human genome, in forensics, in assessing blodiversities, or in identifying mutations in forensics, in assessing blodiversities, or in identifying mutations in forensics, in assessing blodiversities, or in identifying mutations capponsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated oDNA/BST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 mucleotide sequences defined in the specification, where the oligonucleotide comprises at 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the polynucleotide comprising a sequence complementary to be polynucleotide comprising a sequence complementary to a polynucleotide comprising a sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Primer sets for synthesizing polynuclectides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                            CCCCCGTGGAGCTGGCCGTCAGTGGGATGCAGACCCTCGGCCTTCAACACCGCTGCCGAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1748
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1808
oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence)?-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03165 to AAH13629 and AAH3629 to AAH13629 to AAH13629 and represent human amino acid sequences, and AAH13629 to AAH13632 represent coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      517
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      397

                                                                                            The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed carivity of (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and am to acid sequences. AAS64197-AAS9464 represent novel human diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          268

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for draing screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox
                                                                                                                                                                                                                                        toxic effect; gene expression profile; hepatotoxicity; diagnostic marker;
                                                                                                                                                                         Primary rat hepatocyte toxicity modelling related gene SEQ ID NO:1925

Geguences ABP11028-ABP35561 represent 4534 novel human proteins designated ORF (Open reading frame) 1-4534, and sequences ABN75054-C ABN79587 represent cDNNs encoding them. The invention also encompasses collypeptides at least 80% identical to the ORFN-ORF4534 (Collectively referred to as ORFN) proteins, polymuclectides at least 85% identical to the ORFN mucleic acid sequences, vectors and host cells comprising ORFN collymotlectides, the recombinant production of ORFN proteins, antibodies activity proteins, methods of Gereening individuals for a predisposition to an organ methods of screening individuals for a predisposition to an organ methods of screening individuals for a predisposition to an organ proteins of the invention have a wide constructive, and methods of screening individuals for a predisposition to an organ proteins of the invention have a wide constructive activity, haemostatic activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORKy proteins, of bodily characteristics, fertility and behaviour. ORKy proteins, cother proliferative disorders such as epilepsy and Alzheimer's disease, cother proliferative disorders such as epilepsy and Alzheimer's disease, cother proliferative disorders such as epilepsy and Alzheimer's disease, corgan transplantation, disorders coftisme disorders of tissue growth and regeneration, disorders mellitus, hypothyroidism, and cholesterol ester storage disease, and infectious diseases caused by viral, bacterial, corgan transplantation. Of sequences of tissue growth and regeneration, disorders mellitus, and in foremation of ORFX genomic sequences, in the identification and cloning of homologous contranscribts, in the identification and cloning of homologous contranscribts, in the identification and cloning of homologous contranscribts, and in the devenue of primars and probes, in the develo

The present invention describes oligonuclectide libraries for detecting messenger RNAs that populate a (sub) transcribed from multiple.

C transcription units that populate a genome. The library comprises several transcription units that populate a genome. The library comprises several oligonuclectides, each capable of hybridising selectively to a set of messenger RNAs transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonuclectide libraries are useful for detecting mRNAs from a bloogical sample, in expression profiling studies, in qualitatively or duantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised mini clibraries to detect transcripts of a sub-transcriptome under a particular libraries to detect transcripts of a sub-transcriptome under a particular specific genes such as those genes only expressed in specific pathological condition, to detect or are pathological state, and to detect RNA transcripts and splice variants of a transcriptome of a pathological condition, to detect consistent and mich a particular disorder. ABN27253 to ABN29589 represent oligonuclectide sequences from rate, humans and mice, which are used in the exemplification of them care, humans and mice, which are used in the exemplification of them the parinted specification, but was obtained in electronic format consistent invention. Nie, they are obtained in electronic format consistent of the printed specification, but was obtained in electronic format consistent with the parinted specification int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription unit of a genome, useful for detecting tissue-, pathology-, and developmental-
splice variant; transcriptome; oligonucleotide library; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 3.3%; Score 60; DB 6; Length 60; Best Local Similarity 100.0%; Pred. /clone_list strand cDNA was primed with a NotI-oligo(dT)
primer: Five prime end enriched, double-strand cDNA was
digested with Not I and cloned into the Not I and ECOR V
sites of the pCMVSPORT 6 vector. Library was normalized.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1214 GGTGGGTTACACTCTTCACGCCCCTGAAGCGGGGACTTTTCCCATTCCCTCACCCAC 1270
